

<https://ehulak.tech/>

The screenshot displays the Ehulak website interface. At the top, the Ehulak logo is on the left, and 'Docs' and 'Sign in' links are on the right. Below the logo, a tagline reads 'E-hulak . Electronic Post Office'. The main heading is 'Instant, free Email Delivery Service.' followed by a description: 'Send emails instantly with a free API-first platform. Ehulak routes each message from queue → worker → inbox with retries, DLQ fallback, and full visibility built in.' Navigation buttons for 'Sign in', 'Create account', and 'Read the quick start' are present. A note states, 'By using Ehulak, you agree to our Privacy Policy and Terms of Use.' Three feature boxes highlight 'Instant delivery' (Queue + workers send in seconds), 'Live tracking' (See every stage in real time), and 'Free to start' (10/min and 100/hour at no cost). A 'DELIVERY PIPELINE' section shows a 'live' status and a list of messages: 'Welcome aboard' (success), 'Password reset' (retrying), and 'Weekly digest' (pending). A legend below shows 'pending' (Queued), 'retrying' (Processing), and 'success' (Delivered). The 'HOW IT WORKS' section has three steps: 01 Send via API (One POST with your API key — message enters the queue), 02 Pipeline runs (Workers pick up, retry on failure, route failures to DLQ), and 03 Track & recover (Dashboard shows every stage; replay or inspect dead letters). The footer includes the flow 'Queue → worker → delivery · Built for teams who care about deliverability' and links to 'Privacy Policy and Terms of Use'.
